

CORPORATE PRESENTATION

OMNIVOLTAIC ENERGY SOLUTIONS

June 2026

Company Overview

Our history

Omnivoltaic Energy Solutions Co. Ltd. (OVES) designs and manufactures a wide range of off-grid and distributed energy products, including solar-powered lanterns, solar home systems with high-efficiency DC TVs, fans, phone charging, DC power supply, and productive-use applications such as night fishing, commercial shop lighting, and e-mobility solutions. OVES systems integrate smart ROAM™ technology, enabling Pay-As-You-Go (PayGo) functionality and remote data access for improved asset management and customer **engagement**.

Led by Dr. Huashan Wang, a Silicon Valley-based technology visionary and Chief Technology Architect, OVES is headquartered in Hong Kong with direct access to the advanced manufacturing ecosystem in Guangdong, China. Through a global network of distribution partners, OVES delivers high-quality, affordable distributed power generation solutions to households and small businesses worldwide, enabling immediate and reliable access to essential electric services.

OVES Journey From Basic off-Grid to Distributed power

From Lanterns to Distributed Power Solutions

Golden Prize in 2012 lighting Africa

Market Presence

•East and Horn of Africa Presence

- OVES operates in Ethiopia, Kenya, Uganda, Tanzania, Burundi, and Rwanda with strong demand in clean energy and electric mobility.

•Central and Southern Africa Operations

- In Central and Southern Africa, OVES focuses on off-grid solutions and urban mobility in countries like DRC, Cameroon, Malawi, and Zambia.

•West Africa Market Growth

- West Africa features scale and urbanization with OVES active in Nigeria, Togo, Benin, and several other countries supporting clean energy adoption.

•Country-Level Operational Bases

- OVES maintains operational bases in Kenya, Tanzania, and Togo, enabling local support and scalable, sustainable deployments.

PRODUCT & TECHNOLOGY

E-Mobility Series

Includes electric vehicles, LFP batteries, fast chargers, and digital platforms for connected mobility.

Commercial & Industrial Series

Scalable energy solutions for businesses with high power demands and integrated performance monitoring.

Cross-Grid Series

Provides hybrid solar-battery-grid systems ensuring continuous power in unreliable grid environments.

Off-Grid Series

Focuses on affordable, easy-to-install solar lanterns and home systems for off-grid communities and businesses.

Cross-Grid Series

UBP™ Series Unicell Boost Pulsar

Entry-Level Power System

Cost-effective uninterrupted backup power (1K–2K). Ideal for homes and small shops. Includes Pro variants and 228L freezer packs.

Households · SMEs · Cold Chain

Oasis™ Series

Remote & Mobile Power

Integrated AC/DC solar generators (T11, T20, T30) with 1048–2688Wh. Multiple output ports. Perfect for field operations and productive use.

Target Customer Segments

Residential

Urban and peri-urban households needing reliable backup power for essential appliances, lighting, and entertainment.

UBP™ · Town™

Commercial SMEs

Shops, restaurants, pharmacies, and offices requiring continuous power to protect stock and maintain operations.

UBP™ · Town™ · Works™

Industrial & C&I

Factories, agro-processors, and large institutions with high power demands needing scalable, reliable hybrid systems.

Works™ Series

Cold Chain & Agri

Cold storage, food processing, and agricultural businesses requiring uninterrupted refrigeration and power for equipment.

UBP™ Freezer Packs · Oasis™

Health & Education

Clinics, hospitals, and schools that cannot tolerate blackouts — cross-grid ensures 24/7 reliable power.

Town™ · Works™

Field & Remote Ops

NGOs, telecoms, and remote industrial sites requiring mobile, off-grid-capable energy with minimal infrastructure.

Oasis™ Series

Technology & Competitive Edge

Hybrid Solar-Battery-Grid

Seamlessly combines solar generation, battery storage, and grid/generator input. X-Grid™ inverters support multiple DC bus voltages and MPPT solar charging.

LFP Battery Chemistry

Safe, long-cycle Lithium Iron Phosphate batteries with full BMS protection: over-temp, over-discharge, SOC management. UN38.3 & IEC 62133 certified.

Chargeverter™ Integration

Unique eMe™ and Chargeverter™ multi-purpose chargers combine e-mobility battery charging with home power supply — a cross-product OVES advantage.

ROAM™ IoT Technology

Built-in remote monitoring, OTA firmware upgrades, dashboard alerts, and PayGo enablement — industry-first eIoT observability platform (UK EforA award winner).

Pure Sine Wave Output

X-Grid™ inverters deliver clean AC power (power factor 1.0) suitable for sensitive electronics, medical equipment, and industrial machinery.

ISO-Certified Manufacturing

ISO 9001 & 14001 certified factory with 10,000+ hour durability testing. Regulatory approvals across Africa, Asia, and emerging markets.

After-Sales & Support Infrastructure

Industrial Warranty

Standard warranty on all Cross-Grid products. ISO 14001 certified manufacturing ensures consistent product quality.

Remote Diagnostics

OTA firmware upgrades, real-time dashboard monitoring, and status alerts — minimizing field service costs.

Local Support Channels

Kenya & Togo-based support teams in same time zones as customers, with swap inventory for fast fault resolution.

Partner Training

Technical training for local agents and installers, enabling scalable in-country support without OVES dependency.

RELIABILITY & COMPLIANCE

EV modular architecture with BLDC direct-drive motors; robust design for 60 km/h+ speed; BMS/BLDC/fast-charging.

Certified battery packs with safety protections (over-temp, over-discharge, SOC management)

Product Reliability

Rigorous testing protocols with 10,000+ hour durability assessments and real-world performance validation.

Safety Standards

Full compliance with international safety certifications including UN38.3, IEC 62133, and regional standards.

Regulatory Compliance

Certified for operation across Africa, Asia, and emerging markets with local regulatory approvals.

Quality Certifications

- ISO 9001 Certificated Factory
- ISO 14001 Certificated Factor
- High temperature aging test
- Humidity test
- Vibration test
- overcharge / overdischarge test

OUR VALUE PROPOSITION

Multi-Sector Energy Platform

Solutions span electric mobility, off-grid solar, cross-grid systems, and productive-use energy for businesses and communities.

Flexible Energy & Battery Access Models

Customers can choose battery ownership or service-based access, reducing upfront costs while maintaining operational flexibility.

End-to-End Infrastructure

Charging systems, battery swapping, and energy storage create a complete ecosystem that keeps fleets and businesses running.

Reliable Power in Low-Grid Environments

Solar + hybrid systems ensure consistent energy supply, enabling operations even in areas with unstable or no grid.

Lower Total Cost & Higher Productivity

Eliminates fuel dependency, reduces maintenance, and enables predictable costs while supporting income-generating activities.

Built for Commercial & High-Use Applications

Designed for logistics, transport, and SMEs—maximizing uptime and scalability.

Smart & Connected Energy Systems

Integrated technology and IoT improve efficiency, monitoring, and system performance.

Sustainable & Locally Adapted Impact

Reduces emissions, supports Ethiopia's energy transition, and is tailored to local infrastructure and economic realities

Seeking Local Partner in Ethiopia

Local Distribution Partner

Import, distribute, and deploy Cross-Grid systems across Ethiopia with OVES technical support and branding.

Local Assembly (CKD/SKD)

Establish in-country assembly operations for cost efficiency, localization, and scalable growth.

Energy Access Investor

Co-fund Cross-Grid deployment for underserved communities. Blended finance and impact investment welcome.

System Integrator

Bundle Cross-Grid systems with solar installations, C&I projects, and real estate development.
